I Dewa Kadek Dana Gunawan

dewakadekdana@gmail.com | +6281529097310 | https://danagunawanpersonal.vercel.app/

PROFILE

I am a Full-Stack Web Developer focused on building scalable, secure, and optimized web applications, covering both the front-end and back-end. I leverage a wide range of modern technologies, including AI as a tool to enhance efficiency in coding, debugging, and overall application performance optimization. With experience in cross-component application integration, I enjoy working in teams to create seamless and reliable systems, while remaining flexible in writing manual code for more specialized or complex solutions. I believe that the combination of solid technical skills and the right use of AI technology can produce higher-quality products in a more efficient timeframe. My ability to clearly communicate technical ideas and solutions also enables effective and productive collaboration in dynamic team environments.

EDUCATION

BALI STATE POLYTECHNIC   Jul 2022 – Oct 2025
- D3 Informatics Management | GPA: 3.75 / 4.00

EXPERIENCE

Food And Beverage Server – SIX SENSES Uluwatu   Sep 2022 – Des 2022

- After graduating from high school, I took advantage of my holiday period to gain my first work experience as a Food and Beverage Server at Six Senses Uluwatu, Bali, where I assisted guests during breakfast, lunch, and dinner service, took orders, delivered food and beverages, and helped maintain the cleanliness of the restaurant area. This experience helped me understand the basic standards of hospitality and how to provide friendly and courteous service to guests from various countries. As a newcomer to the hospitality industry, I learned how to work in a team, communicate clearly, and remain calm during busy hours, which ultimately enhanced my confidence, discipline, and sense of responsibility in a professional environment.

Wordpress Developer – PT. Digjaya Digital   Aug 2024 – Feb 2025

- During my internship at IAmBehokky, I contributed to the development and improvement of client websites using WordPress, where I designed structured, user-friendly, and fully responsive layouts across various devices by applying fundamental UI and UX principles. Using Elementor, I built custom pages tailored to client needs while ensuring consistency with brand identity and usability standards. Beyond visual design, I also implemented custom functionality using PHP and JavaScript within WordPress themes and plugins, worked with JetEngine for dynamic content structures, and WooCommerce for e-commerce features. I also handled custom code adjustments, minor theme modifications, performance optimization, basic SEO configuration, and technical troubleshooting.

Backend Developer – PT. Kirana Bali Wisata   Sep 2025 – Now

- As a Backend Developer, I specialize in building structured and scalable web applications using Laravel, PHP, TailwindCSS, and JavaScript, with a focus on backend system development, database design, authentication systems, and RESTful APIs. For Rajaprana (rajaprana.com), I developed the backend for a travel booking engine covering spa services and activity packages, with RESTful APIs to manage products, availability, pricing, and transaction flows. For HotelDomestik (hoteldomestik.com), I built a full-stack monolithic application handling hotel room reservations, voucher systems, price calculation, and validation within a single integrated Laravel application. Each system was designed with a primary focus on data consistency and reliability.

PROJECTS

- **SIGKOS PANJER –** GIS-Based Information System for Recording House and Boarding House Residents in Panjer Subdistrict
  - Information system for recording and managing boarding house residents in Panjer Subdistrict.
  - Resident data management, reporting, statistics, and PDF export features.
  - Interactive maps using Leaflet to visualize boarding house locations.
  - Back-end Laravel and Responsive Dashboard.

  Tech Stack : Laravel, TailwindCSS, Bootstrap, Leafletjs
- **Tryout CPNS –** Platform Ujian Online
  - Online tryout platform for CPNS exam preparation with 6 different tryouts.
  - Automatic timer and real-time result evaluation.
  - Participant data and tryout results are stored using Supabase.
  - Online payment integration using Midtrans for tryout packages.

  Tech Stack : Nextjs 15, TailwindCSS, Supabase, Midtrans

  Preview : https://zonacpns.com

- **Rajaprana –** Booking engine for spa reservation
  - Create a backend management dashboard for all spa features.
  - Provide the necessary APIs for the front end.
  - Create sales reports using automated Excel and PDF formats.
  - Send an email after the customer has successfully completed a transaction and ensure the payment succesful.

  Tech Stack : Laravel, TailwindCSS, Fullcalendar, Jokul payment

ORGANIZATION

Aksosma Group 182   Jul 2022 – Aug 2022
  - Organized the distribution of food assistance to underprivileged residents.
  - Facilitated student community service programs, including educational initiatives and social activities within local communities.
  - Coordinated volunteer teams and members to ensure the smooth distribution of aid.
  - Increased student participation in social initiatives and fostered a stronger sense of social responsibility and community awareness.

TRAINING AND CERTIFICATION

- **Learn to Create Back-End Applications for Beginners, Dicoding**   Okt 2023
  Modules: Introduction to Back-End Development | Node.js Fundamentals | Building Web Services using Node.js | Deploying Web Services | Consuming and Testing RESTful APIs using Postman.
- **Cloud Practitioner Essentials (Learn Basic AWS Cloud), Dicoding**   Nov 2023
  Modules: Introduction to Amazon Web Services | Cloud Computing Concepts | Global Infrastructure and Reliability | Networking.
- **Front End Web Development, Devsnest**   Jun 2025
  Module : HTML, CSS, TailwindCSS, React with Vite.

SKILLS

Language	: Indonesia, Inggris
Programming Language	: PHP, JavaScript, TypeScript, SQL
Framework	: React, Next.js, Laravel
Platfrom and Tools	: Github, PostMan, Supabase, ChatGPT, Claude
Other	: Debugging & Troubleshooting, System Optimization, Basic SEO
